LIST OF PESTICIDE PRODUCT INERT INGREDIENTS

The attached document is a comprehensive list of pesticide product inert ingredients and their associated Chemical Abstract Service (CAS) Registry Numbers. This list is inclusive of the previously published Lists 1, 2, and 4, as well as those inerts which were to be compiled as List 3. This list represents OPP's most exhaustive and complete effort to date to identify and compile pesticide product inert ingredients.

Pesticide regulation is a dynamic process whereby products are continually being registered and cancelled, and product formulations frequently are revised or alternated. This inherent factor affecting the accuracy of any compilation of inert ingredients should be noted.

At the present time, OPP records do not readily permit the confirmation of the presence of any given listed inert in currently registered pesticide products. Therefore, this list should not be construed as a compilation of "acceptable" inert ingredients but rather as a candidate list of inert ingredients which may or may not be present in currently registered pesticide products.

Conversely, the fact that a particular chemical is not on the list does not mean that it is not present as an inert ingredient in a registered pesticide product; it may have been inadvertently omitted from the list. Any chemical not appearing on this list will generally be considered a new inert ingredient unless appropriate documentation is provided which establishes the presence of the chemical in currently registered pesticide products.

If you have any questions, please contact the Public Response and Program Resources Branch on (703) 305-5805.
